Chapter 15: Social Network Analysis

1. Introduction

Social network analysis (SNA) examines relationships and interaction patterns among course participants. Centrality metrics identify influential students and knowledge brokers in the learning community.

2. Network Properties

Nodes: 30, Edges: 83, Density: 0.191

3. Results

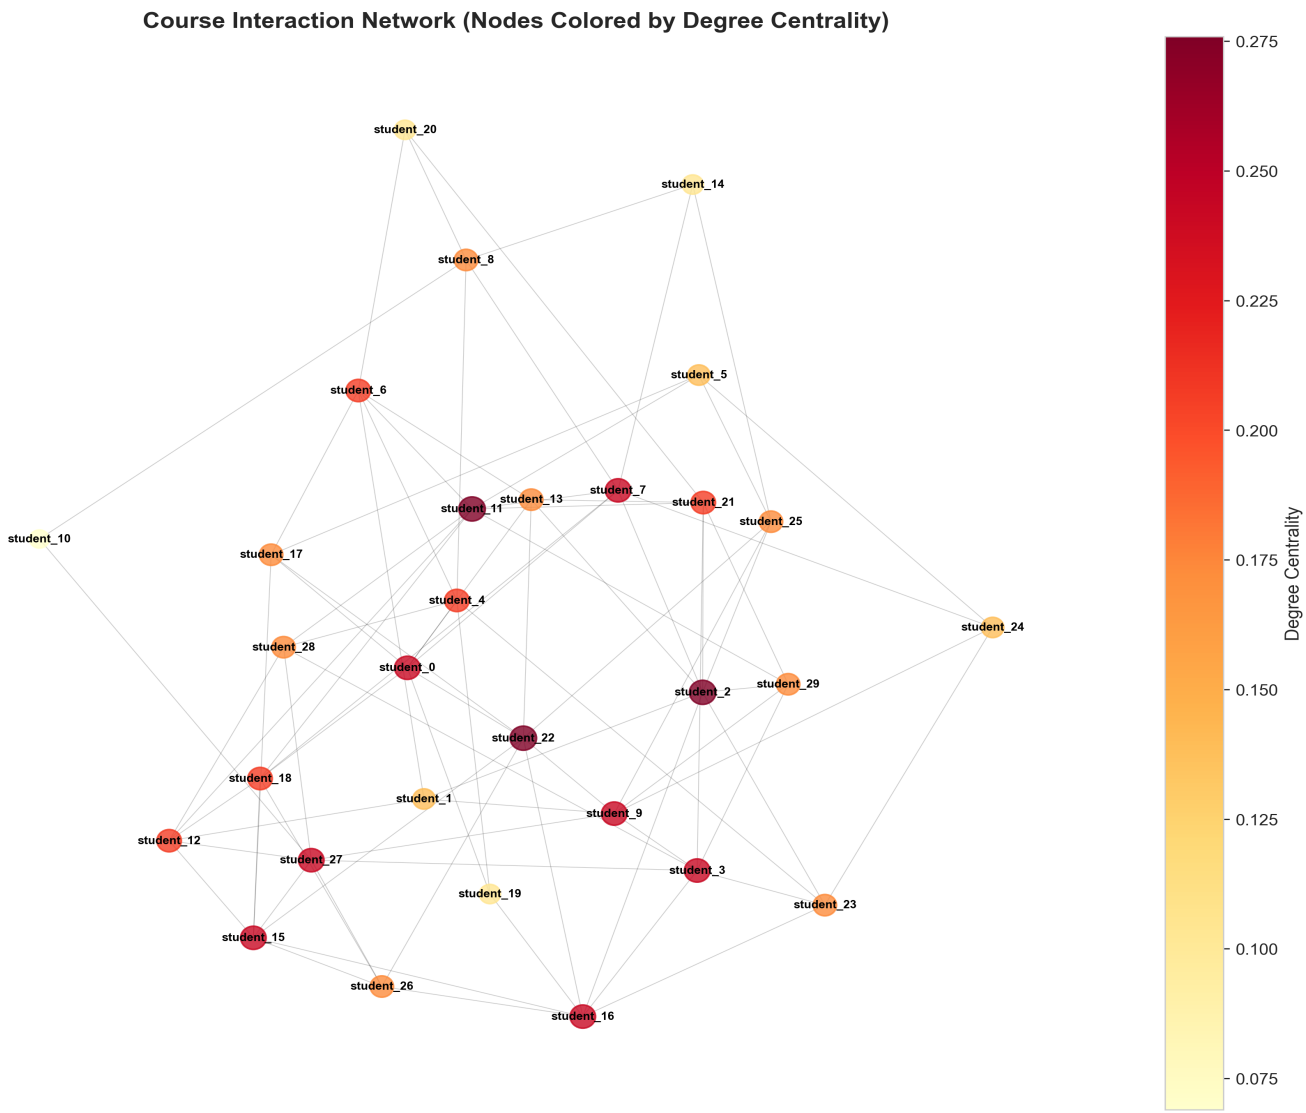

Fig 1: Course interaction network.

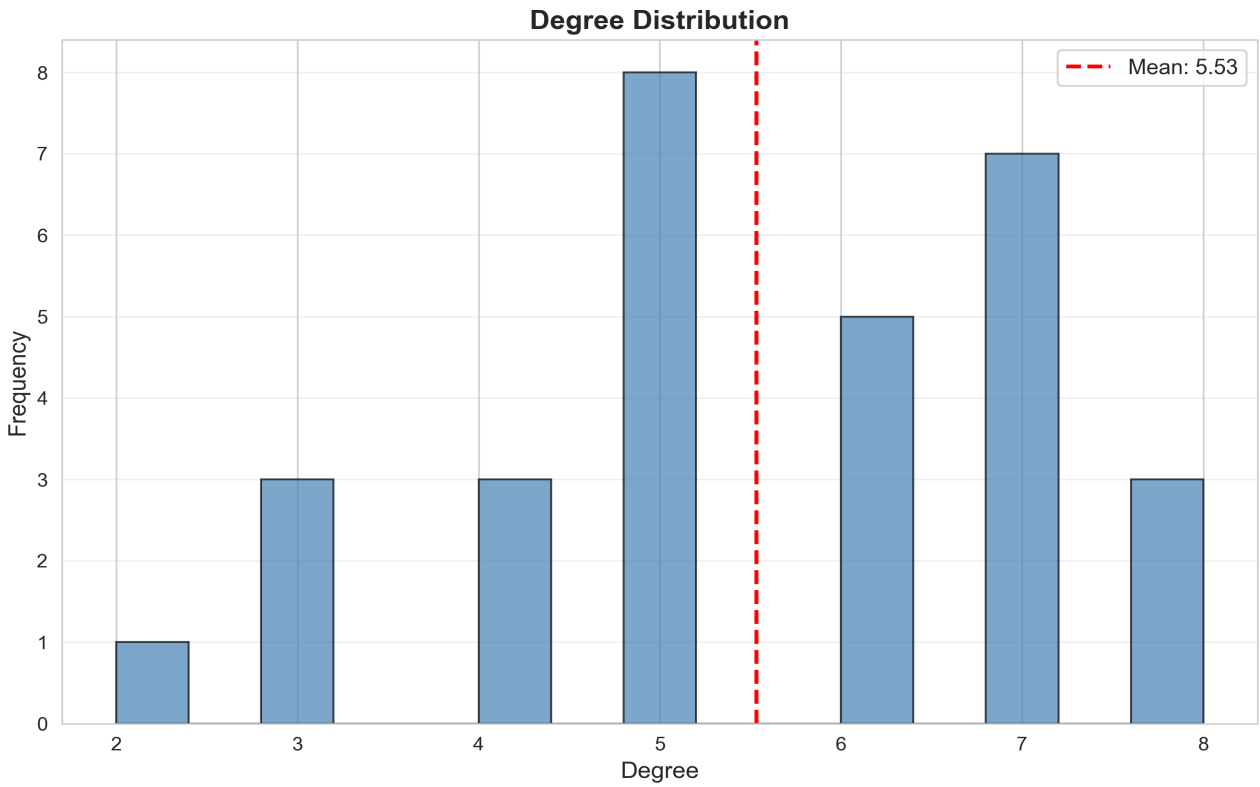

Fig 2: Degree distribution.

4. Interpretation

Degree centrality identifies highly connected students. Betweenness identifies brokers who bridge student groups. Closeness measures quick information spread from a node.
